

- Isotopes found in human blood [shells] that break according to width
- Masts are strings per form behavior it creates
- gY is the skeletal structure of what's underneath (breath). Becomes vacant E or surplex in C

Seldom does width hold the same adjacent degree so vacuums in C can define width by structure c.

- 1
- 2
- 8
- *18

1. Glucose is the hydrogenated cell in bloodstreams adjacent to s
2. Latitude by degrees in vacuums (L χ), c cells (L ν), h-g.

- Gracity holds true to (birth)- own systems unit weight (hormones x serotonin). Per unit square thé heart (Surplex).

System 1 and 2 in c measurement = lightwaves

- 1 :loo
- 2 loo Ture
- Subconscious ... in True

Factor 1

- 8x8x8

Adjacent to male (figurative [me] = glucose cells Y13).

- M::2

Hormones

- 1x1x1 H
